Subject: RE: Eight Associates Report E167-report-1007-09jp

Hi Dan,

Thank you for your email. I have been advised by Eight Associates that they believe the calculations were made based upon previous project's data collection and the Carbon Calculator and Construction Carbon Calculator from the Environment Agency. I am afraid we don't have any further details on this. The Life Cycle report was produced in 2010 as part of the evidence for the Core Strategy which was adopted in 2010 and we no longer hold detailed background information on all the documents that were produced at that time.

Kind regards,

Preeti

Hi Preeti

RE: Eight Associates Report E167-report-1007-09jp

I have been given you contact details by Eight Associates regarding a query within the above report.

Within the report there is a CARBON FACTOR figure of 2000kg/month for "Works Time-frame".

I cannot find the source of this figure and was wondering if you could advise where it comes from?

Many thanks in advance

Dan
