Holland Ward Profile

Introduction

The Census occurs once every ten years, the most recent of which fell on 27 March 2011. This report gives a summary of Census data for Holland ward.

In 2014, each ward in Kensington and Chelsea had changes made to its ward boundaries meaning that no Census data exists specifically for these new wards by the Office for National Statistics. To alleviate the data gap, this summary uses Output Areas (OAs) as the building blocks for the new wards. OAs are the smallest Census geography, containing circa 150 residents. OAs are allocated using a best fit model, therefore ensure that these profiles are treated, and the numbers they contain, as being illustrative only.

For ease of use Census data has been subdivided into three distinct themes:

- Who we are...
  Population, ethnic group, country of birth, passports held, religion, health

- How we live...
  Marital status, living arrangements, household composition, accommodation, tenure, car or van availability, overcrowding

- What we do...
  Economic activity, hours worked, qualifications and students, industry, occupation, unpaid care

Disclaimer: All data relates to the Census 2011 figures released by the ONS and all figures are rounded to one decimal place in the text and to one significant figure in the charts.

Workday Zones

Workday zones (WZs) are a new output geography for England and Wales which has been produced using workplace data from the 2011 Census. The population of an area changes as people move in and out of an area to work. For the Workday Population the Usual Resident Population is re-distributed to their places of work, while those not in work are recorded at their usual residence. (ONS, 2014) Figures are compared with the Census 2011 Usual Resident Population numbers.
