

KEY FACTS ABOUT WASTE IN THE ROYAL BOROUGH OF KENSINGTON AND CHELSEA: ADDENDUM

The previous waste report stated that: “consideration will also need to be given to the review of the London Plan and the impact that this may have on waste apportionment targets in the period up to 2031.”

In the Minor Alteration to the consultation draft Replacement London Plan, the Mayor findings show that the Royal Borough’s municipal and commercial/industrial waste projections will be 267,000 tonnes by 2021. The Council’s share of the waste apportionment will amount to 227,000 tonnes per annum, requiring 2.9 hectares of land to manage this waste. The 2.9 hectares required can include existing waste management sites but not depots. Therefore, Cremorne Wharf (0.4Ha) is the only site that can be counted against the apportionment figure. This would leave a requirement to find 2.5 hectares of land for waste processing purposes.

The forthcoming ‘Waste DPD’ will set out how this apportionment figure will be met.
